

FOR A SEAMLESS FIXING THAT LASTS!

Quick and easy to use!

The ASfix wall plug optimally transmits the force into the building material by means of 4-way expansion. The high quality nylon used for its manufacture, in addition to the typical expansion, ensures a secure and durable fixing. The ASfix wall plug is the first choice for fixing, for example, lighting, pedestals, bathroom and toilet installations and lightweight wall cabinets in concrete and aerated concrete, as well as in walls made of solid or hollow building materials. Versions with pre-shaped edges prevent the insert from slipping into the hole.
